Domains: $H: \mathcal{T}_A \rightarrow \mathcal{A}$ is an \mathcal{A} -morphism satisfying $H \circ \eta_a = 1_a$ and $H \circ \theta_h = H \circ \mu_a$.
 For example, domain theory provides three models for nondeterminism, the lower power domain PL , which assigns to a domain the family of Scott-closed Σ . See [1] for details about these categories.

3 A domain is coherent if I May 2th, 2024
 Discrete Random Variables Exam Questions Q1 (OCR 4766, Jun ... Q5, (Edexcel 6683, Jan 2007, Q3) Q6, (Edexcel 6683, Jan 2008, Q7) Q7, (Edexcel 6683, Jan 2011, Q6a,e-g) The random variable X has probability function $(2x -)$ 36 (a) Construct a Jan 3th, 2024.

Lecture 6: Discrete Random Variables
 $A = 0$, in which case $X \geq 0$, or else $1 - A = 1$, but then $X \geq A$. So $E[X] \geq E[A] = AE[1 - A] = APr(X \geq A)$. The Chebyshev inequality is a special case of the Markov inequality, but a very useful one. It's plain that $(X - E[X])^2 \geq 0$, so applying Feb 1th, 2024
 13 Joint Distributions of Discrete Random Variables
 The converses of Proposition 13.4 and Corollary 13.5 are false. For example, it is possible to have $E(XY) = E(X)E(Y)$ even when X and Y are not independent. Application Corollary Jun 2th, 2024
