Chapter 1 Electric Charge; Coulomb's Law

As we now know, when charges are transferred by simple interactions (i.e. rubbing), it is a negative charge which is transferred, and this charge is in the form of the fundamental particles called electrons. The charge of an electron is 1.6022×10^{-19} C, or, using the definition $e = 1.602177 \times 10^{-19}$ C (1.1) The electron's charge is $-e$. 2th, 2024

Coulomb's Law Problems

Find the force between charged objects, we can use Coulomb's law, which is $F = k \frac{q_1 q_2}{d^2}$. In this equation, "d" is the distance between the objects, q_1 and q_2 are the charges on the charged objects, and k is a constant equal to 8.99×10^9 N m²/C². This law is similar in form and structure to the law of gravitation.
